

# UFM

## Noise Filters

Used with the BA series amplifiers to minimize input line noise for CE compliance

Modular panel-mount package for easy mounting and hook-up

Works with any amplifier operating 0-240 VAC input voltage

Aerotech's UFM noise filter module is used to reduce conducted line noise generated by switching servo amplifiers. The UFM is used with any BA series amplifier to conform to CE noise directives.

### UFM Filter Specifications

Input Voltage	VAC	0-240
Output Voltage	VAC	0-240
Continuous Current	A <sub>pk</sub>	15
Peak Current	A <sub>pk</sub>	30
