

# System Checkout

**Parameters Files Set** — Each system is configured with a fully functional parameter file including tuning. The parameter file is shipped with every system and greatly reduces system setup time.

**System Plots and Drawings** — Interconnect and wiring drawings are included with each system. Also, with Aerotech Certified systems, performance plots are provided for all axes.

**Testing with Custom Load** — Aerotech tunes and tests systems with customer-specified loads resulting in optimized systems.

**Systems Mounted to Granite** — Custom granite bases can be supplied and configured with the system. This allows the system to ship with minimal processing and mounting requirements.

**Cabling Fully Connected** — All systems are fully integrated with appropriate cabling. Our connector scheme ensures out-of-the-box, plug-and-play operation.
