

PWM Servo Drive

Automation1 XC4

Precision Comes Standard

The XC4 PWM digital drive is a single-axis motor drive for precision motion control applications. It communicates to Automation1 PC- and drive-based controller products over the HyperWire® motion bus, supports multiple feedback device types and includes on-board memory. The amplifiers control brushless DC, brush DC, voice coil and stepper motor types at up to 340 VDC operating voltage and 30 A peak current capability. Control your industrial laser or process tool with precision using multi-axis Part-Speed PSO; control your entire process with an I/O or industrial Ethernet expansion board.

Automation1

The XC4 is a part of the user-friendly Automation1 motion control platform, which includes the following:

- Development Software
- **♦** Controls
- Motor Drives
- **♦** Fiber-Optic HyperWire® Communication Bus

KEY FEATURES:

- High resolution current-loop enables precise

Notes:

- 1. For stepper motors only, one-half of bus voltage is applied across the motor (e.g 80 VDC supply results in 40 VDC across stepper motor).
- 2. Output voltage depends on input voltage.
- 3. Peak value of the sine wave; rms current for AC motors is 0.707 $\ensuremath{A_{pk}}\xspace$
- 4. Encoder feedback-based PSO requires the -MX0 multiplier option.
