

Single-Axis Direct-Drive Goniometers **ANT20G**

Precise Pivot-Point Rotation

Our ANT20G goniometers are designed for high-speed, ultra-precise positioning applications such as the angular alignment of components. This unique design uses our best-in-class direct-drive noncontact motor technology for extremely smooth, repeatable motion and provides an industry-leading positioning speed of up to 150 degrees per second to achieve optimal throughput. Two goniometer cradles can be mounted orthogonally to achieve highly precise pitch and roll motion about a common pivot point.

Key Applications

ANT20G stages are ideal for a variety of high-precision industrial and laboratory processes, including:

- ◆ Photonics assembly & inspection
- ◆ Fiber alignment & optimization
- ◆ Sample positioning in synchrotrons & beamlines
- ◆ Optics manufacturing, testing & inspection
- ◆ Sensor testing & qualification
- ◆ X-ray & CT inspection

KEY FEATURES:

- ◆ Provides ample **20-DEGREE ROTATION ANGLE**
- ◆ **MAXIMIZES THROUGHPUT** with speeds to 150°/s & accelerations to 1200 rad/s²
- ◆ Offers **EXCELLENT RESOLUTION & IN-POSITION STABILITY** for high-precision processes
- ◆ **ELIMINATES MAINTENANCE** with frictionless, non-cogging direct-drive motor
- ◆ **INTEGRATES EASILY** into multi-axis assemblies for reliable rotation about a single point

Notes:

1. Certified with each stage.
2. In-Position Jitter listing is 3 sigma value.
3. Specifications are per axis, measured at the rotation point. Performance of multi-axis systems is payload and workpoint dependent. Consult factory for multi-axis or non-standard applications.
4. To ensure the achievement and repeatability of specifications over an extended period of time, environmental temperature must be controlled to within 0.25°C/24 hours. If this is not possible, alternate products are available. Please consult Aerotech Application Engineering for more information.

Integration (Required)

Aerotech offers both standard and custom integration services to help you get your system fully operational as quickly as possible. The following standard integration options are available for this system. Please consult Aerotech if you are unsure what level of integration is required, or if you desire custom integration support with your system.

-TAS Integration - Test as system

Testing, integration, and documentation of a group of components as a complete system that will be used together (ex: drive, controller, and stage). This includes parameter file generation, system tuning, and documentation of the system configuration.

-TAC Integration - Test as components

Testing and integration of individual items as discrete components that ship together. This is typically used for spare parts, replacement parts, or items that will not be used together. These components may or may not be part of a larger system.
